

NAME

OriosBank – Documentation of fixes and enhancements

SYNOPSIS

This document summarizes the changes made to the OriosBank project.

DESCRIPTION

The OriosBank project underwent a series of fixes to resolve compilation errors and ensure proper data persistence and logical consistency.

COMPILATION FIXES**AccountMenu.java**

The AccountMenu class was attempting to assign values to final fields inherited from the Menu class in its constructor. Refactored the Menu class to include a constructor that accepts all required services and the scanner. The AccountMenu now correctly calls super() to initialize these fields.

MODEL REFACTORING FOR PERSISTENCE

Several models were updated with specialized constructors to support loading existing data from files.

Customer Model

Added a constructor that accepts customerId, hashedPassword, and registeredAt. This allows the CustomerRepository to reconstruct Customer objects exactly as they are stored in customers.txt.

Account Models

Added constructors to support loading accountId, balance, createdAt, and transactions list for both SavingsAccount and CheckingAccount.

Transaction Model

Added a constructor for loading transactionId and timestamp from storage. Standardized the toString() format.

REPOSITORY LAYER ENHANCEMENTS**TransactionRepository (New)**

Implemented a dedicated repository for transactions, persisting data to data/transactions.txt.

AccountRepository

Refined update logic to use exact string matching on ID. Improved parsing to handle persistence constructors.

CustomerRepository

Replaced reflection-based field setting with the new persistence constructor.

SERVICE LAYER INTEGRATION**TransactionService**

Refactored to use TransactionRepository for true persistence.

BankService & AccountService

Integrated TransactionRepository to log all financial activities: Initial deposits, Deposits, Withdrawals, and Transfers.

VERIFICATION

All source files compile successfully. Data persistence has been verified across restarts. Logical errors in the CLI flow have been resolved.
